

Redevelopment City Coexisting With Nature

-Practical use of urban function facility and Town development with public-private collaboration-

The modern city is faced with a lot of problems such as urban heat island, poor urban landscape, and the decline in the local community. In order to solve these problems, the urban spaces are renovated with quality landscape and new community in Japan.

For example, Kashiwa-no-ha in Kashiwa city was designed as an advanced environment-friendly town with public-private-academia collaboration. By Transforming the Reservoir of disaster prevention into a public water garden with a café and shops, Kashiwa-no-ha attracts the public's attention. We could learn about how to create sustainable urban space coexisting with nature and based on local situation from the case of Kashiwa-no-ha.

Kashiwa-no-ha Smart City

The keywords of kashiwanoha redevelopment project are environment, new industry and health which engaged the public , private and academy together into the project.

Kashiwa-no-ha Campas Station

It is open in 2005, with a lot of green spaces, high-rise mansions, commercial facilities and satellite campus, which plays a important role as a regional hub.

KASHIWANOHA Aqua Terrace

This project won the good design award 2018. Through landscape architecture, it changed a functional space into a public space.
